How to Connect to the New Wireless Network (Leopard & Snow Leopard)

The following instructions work for both wesfacstaff and wesstudent. Connect to the appropriate network. Your credentials will dictate your access. Student accounts cannot use wesfacstaff nor faculty/staff accounts use wesstudent. The below screen shots show weststudent but are the same for wesfacstaff.

Unplug any other network cables from your computer. Turn Airport Off (or WiFi if you are using OS X Lion). Do this by clicking on the WiFi Icon at the top right and select Turn Airport Off.

Open Network preferences by clicking on the WiFi icon at the top right and selecting it from the dropdown menu. This window will appear:
**Make sure the Lock at the bottom left is unlocked so you are able to make changes to your network settings. Click on it if it is Locked and Enter your Mac Username and Password if it prompts you**

Now Turn Airport On (or Wi-Fi if using Lion) using the button at the top right, but do not select a wireless network. Click on Advanced... at the bottom right.

Click the heading “802.1X”, shown by the red arrow.

![Network Configuration](image)

Everything should be blank at this point. If you have any profiles setup on the left hand side, uncheck them for now. Click the (+) at the bottom left.

Click Add User Profile...
Under **User Profiles**, a text edit “Untitled” box will appear for you to name the network profile. Name it “WPA:wesstudent” or “WPA:wesfacstaff” depending on which network you are trying to connect to.

For **User Name** and **Password**, enter your Wesleyan username (not your full email address) and password. Uncheck “Always prompt for password” unless you’d prefer not to.

Under “**Authentication:**” check **TTLs, PEAP, and EAP-FAST**.

For **Wireless Network**: choose **wesstudent** or **wesfacstaff** for which network you are attempting to connect to.

Change **Security Type** to **WPA2 Enterprise**

Click **Ok** at the bottom right.

You should now be taken back to the main **Network Settings** page. Adjacent the bottom of the window you will see **802.1X: WPA: wesStudent** (or **wesfacstaff**).
Click on **Connect** and it will authenticate your login information. (It may be connecting automatically).

After a few seconds, you should be connected to **wesStudent (wesfacstaff)**. Underneath should be listed the duration you've been connected to the network. Click on **Apply** at the bottom right and now you may exit out of **Network Settings**.

Open Safari or whichever web browser you prefer. You will not have to enter your information in again like you've had to do before.

You are now connected to **wesStudent**!

**For future logins, **Airport** should automatically connect because of the **user profile** we have just created. Ensure that you are connected, and then open your web browser of choice. Remember, you are still under Wesleyan University's same Internet policies and regulations.**
