

The value of senior Honors theses in Art History lies in the depth, rigor, and academic integrity of the work. Accordingly, the Art History Program does not permit the use of large language model AI tools in senior Honors theses. This includes the use of Generative AI transformer-based models such as ChatGPT, Gemini, NotebookLM, Claude, etc. The use of chatbots to conduct substantial elements of one's research, including interpreting or summarizing literature, is likewise prohibited. (For questions regarding the use of such tools for translating foreign language texts, please consult with your tutor; the presence of any AI-powered translation must be cited clearly as such in the thesis.) AI-powered writing assistants such as Microsoft Co-Pilot and Grammarly are not allowed. Please do not hesitate to reach out to your thesis tutor or the Honors coordinator should you have any questions. We will ask you to sign an affirmation upon submission of your thesis in the spring confirming that you have abided by our AI policy.

We understand that what's allowed here may differ from other courses and other departments. If you are unsure about whether or how you can use a particular GenAI tool, discuss with your tutor or the Honors coordinator. Remember: Using AI tools isn't just about following rules. It's about developing your skills as a thinker, researcher, and ethical communicator in an AI-integrated world.

You may not use GenAI for

- Generating outlines for chapters or portions of the thesis
- Submitting writing generated by AI
- Editing writing in terms of grammar and style
- Skipping the reading and relying on AI summaries
- Using research tools like Elicit to pull out claims, methods, or findings from articles or other sources.

Please note: Wesleyan's Honor Code, Regulation 2: Plagiarism, now defines it as: "...the presentation of words, ideas, images, data, or research that are not your original work without citation. *This includes words, ideas, and images generated by artificial intelligence...*"
