CSS 240: The Emergence of Modern Europe  
Sophomore History Tutorial  

Fall 2018-Spring 2019

Time: F, 2-4:00  
Bldg/room: PAC 411  
Tutor: Prof. E. Grimmer-Solem  
Office: PAC 414  
Office hours: M & W, 9:30-10:30 & 3:00-4:00; or by appointment  
Phone: x-2397  
E-mail: egrimmer@wesleyan.edu  
Website: http://egrimmer.web.wesleyan.edu/

Course description:

This tutorial sequence analyzes the formation of modern European society from the late 18th to the last quarter of the 20th century. Most attention will be placed on Britain, France, Germany and Russia as these countries were shaped by, and responded to, demographic, economic, social, political and intellectual forces that led to revolutions, political and social reforms, new modes of production, changes in social hierarchies, and new forms of warfare. Much attention will be placed on the social and political consequences of the French Revolution and industrialization, but empire, the origins and consequences of the two world wars (including the Russian revolution and the rise and defeat of Nazism) will also come under extensive discussion, as will the creation of a more stable and prosperous postwar European order. Europe’s links to Africa, Asia and the Americas will be discussed in the context of revolution, industrialization, imperialism and the two world wars. In addition to developing knowledge of the most important processes that have shaped the modern world, this tutorial seeks to foster a critical awareness of the varieties of historical narrative, the skills needed to interpret historical primary sources, and the possibilities and limits of history as a tool of social investigation.

Course requirements:

You are expected to write weekly essays for eight weeks corresponding to the tutorial topics on the syllabus below. Tutorial sessions meet each Friday to discuss the topic of the week and the essays that were written for it. Students are not assigned grades but are given feedback on their weekly written work. The weekly essay must be completed and submitted in Moodle before the tutorial session on Friday. Keep in mind that if you fail to do the readings or complete the essays on time, the value of the session is undermined not only for you but for everyone else in the tutorial. Moreover, given the pace of the tutorial, it is very difficult to catch
Weekly essay instructions (please read very carefully):

After completing the readings, identify the most important theme or problem encountered in the readings and the most significant analytical question it raises. A range of possible questions is suggested below under “some possible questions to consider” for each topic. These questions are there to get you thinking about the kinds of themes and questions you could address. You may use these as essay prompts, but ideally you will come up with your own question in response to an interesting theme you’ve identified in the readings.

If you are drafting your own prompting question, be sure it is analytical question about your theme, that is a question that asks “how” or “why.” Such a question can be phrased in different ways and need not start with “how” or “why,” but what such questions have in common is that they allow you to analyze and interpret the past critically with an eye to historical causation. Analytical questions also often require you to extend specific ideas or arguments in readings to other settings or infer conclusions.

After briefly introducing your theme and raising your question, state your thesis (argument) in response to that question along with your main supporting arguments in the opening paragraph of your essay. This opening paragraph should take up no more than 1/3 of the first page of your essay. In the body of your paper carefully demonstrate your thesis by developing the supporting arguments paragraph by paragraph, making use of the tutorial readings where needed using Chicago-style footnote references (more below). Do not quote the readings—paraphrase instead, and be sure to use only the assigned readings in supporting your arguments. Your essay must demonstrate familiarity with the readings, critical thinking, independent judgment, and be persuasive. It is unacceptable merely to repeat opinions or positions from the sources; you must demonstrate why you agree or disagree with those positions in a critical and informed manner.

Thoroughly proofread for proper grammar, spelling, tense, and diction. Before submitting the final draft, have a classmate, friend or writing mentor read through it for clarity and coherence. If no one is at hand, read it aloud to yourself. In writing, always aim for succinctness and economy. Avoid the passive voice and jargon whenever possible. A now classic guide for this kind of writing is George Orwell’s 1946 essay *Politics and the English Language*. Please be sure to read it before starting on your first paper.
Your papers should be no longer than five double-spaced pages. Papers exceeding this page limit will not be accepted. Your papers must have 1 ¼-inch left and right margins, 1-inch top and bottom margins, be double-spaced, paginated, and drafted in a 12-point font on an 8 ½ x 11” page. Do not use a font smaller than 12 points or manipulate margins or spacing to get around the page limit. I will only accept PDF versions of your papers submitted to the course Moodle before the Friday 2:00 pm deadline. Name your paper files by last name and week number, e.g., Smith_week_1.pdf.

Important things to keep in mind:

- **Develop an argument in response to an analytical question.** All historical analysis is driven by questions that invite interpretation and argumentation. The purpose of the weekly paper is **not** to practice writing five page papers; rather, it is to get you to learn the process of devising interesting questions and developing your own sustained arguments.

- **Be concise.** It’s impossible to integrate all of the readings into a paper of 5 pages. You should focus only on those readings relevant to your question and argument. Don’t exceed the page limit!

- **Don’t be simplistic.** Historical processes are often complex, so be sensitive to the workings of structure, culture, agency and contingent factors in history. Short response papers are no excuse for reductive or simplistic arguments that ignore this complexity.

- **Don’t moralize or prescribe.** It’s not your task to ride a moral high horse through the past or to suggest policy after the fact. Don’t judge—seek to understand how or why things unfolded as they did and try to interpret why people thought and acted as they did in their historical context.

- **Avoid presentism.** Don’t interpret the past in terms of present-day values or worldviews, and don’t assume people in the past had the same values or assumptions that you have. Think and argue with a contextual perspective, and always use the past tense when discussing people or events of the past.

- **Double space your papers, provide 1 ¼-inch left and right, 1- inch top and bottom margins, paginate, and use a font no smaller than 12 points in your running text.** Failure to abide by these formatting rules, keep to the page limit, or use proper footnotes will result in an automatic 1/3 letter grade reduction of your paper for each instance of such failure.

- **Submit your paper to the course Moodle as a PDF file before the start of class,** as it will be graded and returned to you electronically (no paper submissions). Name your file by last name and week number (e.g., Smith_week_1.pdf). **Late papers (i.e., anything submitted after 2:00 pm Friday) will not be accepted.**

**Referencing instructions**
In making footnote references to the readings, use only the Chicago footnotes-bibliography style. This style is standard for the discipline of history and is outlined in Kate L. Turabian, *A Manual for Writers of Term Papers, Theses, and Dissertations*, 7th ed. (Chicago: University of Chicago Press, 2007), chapters 15-16 (in Moodle), as well as in the Chicago-Style Citation Quick Reference Guide.

Footnotes appear at the bottom of the page on which references are being made in the running text of your paper. A footnote number should normally only be inserted at the end of full sentences and after terminal punctuation (.?!). The corresponding footnote should be single-spaced and in 10 point font. A first footnote gives full information about the author, source title, publication information, and page number to which you are referring. It should look like this:

An immediately sequential footnote to the same source and page number should use the abbreviation “ibid.” in the footnote for the Latin term *ibidem* (“in the same place”). It should look this:

2. Ibid.

If a different page number to the same source is being referenced:

3. Ibid., 71.

If you refer to another source in the next footnote but then refer back to a source already cited in full in an earlier footnote in the next footnote, give only a shortened version of this source in that footnote (last name, short title, and page number), e.g.:

9. Ibid., 221.

Since the first footnote reference is in effect a full bibliography entry, no separate bibliography is needed.

**Plagiarism:**

With the ubiquity of the web, plagiarism has become easier and consequently an increasing problem on many campuses, including Wesleyan. Plagiarizing is taking and passing off as one’s
own the ideas or writings of another person, whether from the web or from printed sources. Plagiarism can also occur if you paraphrase passages of someone else without clear references to that source. **Plagiarism is an act of dishonesty and a violation of the University’s Honor Code.** Consequently, clear cases of plagiarism will normally result in a failing grade and they can result in dismissal from the CSS and University disciplinary action. Be warned that while the web has made plagiarism more tempting, the same technology makes it easier to catch plagiarists. If I suspect it, I reserve the right to enter suspected passages of papers into search engines and Turnitin.com, a plagiarism detection service contracted by Wesleyan.

**Computers in class:**

Numerous studies, among them by Risko et al. (2013) in *Computers & Education*, have shown that students using computers in lecture classes are easily distracted by such things as e-mail, messaging, social media and web surfing, all of which significantly reduce attention to, and retention of, lecture material. Likewise, experiments conducted by Sana and Weston (2013) show that classroom computer use actually lowers grades on quizzes and exams. Another recent experimental study shows that taking notes on a computer is inferior to taking them in longhand in terms of learning and retention of content for quizzes and exams. This study, by Oppenheimer and Mueller (2014) in *Psychological Science*, showed that students who took longhand notes performed significantly better on quizzes with conceptual questions than those taking notes on a computer. The study also showed that longhand note takers were much better at retaining content for examinations than computer note takers. This is due to the superiority of the thinking and distilling processes that takes place when taking notes by hand over the verbatim note taking that tends to take place when using a computer. For these reasons, I request that you do not use a computer or other electronic devices in class.

**Students with disabilities:**

Wesleyan University provides reasonable accommodations to students with documented disabilities. Students, however, are responsible for registering their documented disability with Accessibility Services in the Office of Student Affairs and making their requests for accommodation known to me in a timely manner. If you require accommodations in this class, please make an appointment with me as soon as possible—by the end of the 1st week of the tutorial at the very latest—so that appropriate arrangements can be made. The procedures for registering are outlined on the Office of Student Affairs Accessibility Services website.

**Required texts:**

13. A series of readings available as PDF files under “Course Documents” from the course Moodle page. These readings are flagged by “Moodle” in the tutorial schedule below. Please be sure to have the Adobe Acrobat Reader installed on your computer.

The required textbooks are available for purchase from the [Wesleyan R.J. Julia Bookstore](https://www.rjuliabookstore.com), 413 Main Street, Tel: (860) 685-3939. They are also available on 2-hour loan from the course reserve in the Olin Library. Be sure to bring the relevant required readings to class, as we will be analyzing various passages from these sources in the tutorial.
Other recommended texts:

In the past, some CSS sophomores have found it helpful to consult textbooks that offer a broader overview of the countries and historical periods covered in this tutorial sequence. You may wish to consult the following texts, but please do not rely on or refer to them in your essays:

The recommended texts will be on two-hour loan from the course reserve in the Olin Library.

Tutorial schedule:

WEEK 1: The French Revolution

1.) University of Chicago Readings in Western Civilization, vol. 7 (Moodle):
   a) Sieyès, What is the Third Estate? 154-79.
   b) The Tennis Court Oath, 201.
   c) Decrees of the National Assembly, 226-31.
   f) The Decree Establishing the Levée en Masse, 340-42.
   g) Robespierre, Report on the Principles of Political Morality, 368-84.
   h) The Conspiracy of Equals, 393-403.

2.) C.A. Bayly, The Birth of the Modern World, 49-120.

Liberty, equality, and popular sovereignty were potent political ideals during the French Revolution, yet establishing a workable and stable constitutional government eluded France in these years. Indeed, France would be wracked by cycles of revolution, reaction, and dictatorship. Nevertheless, the Revolution did have a profound enduring legacy, not only in France but also elsewhere in Europe and overseas. It spawned the modern political ideologies of liberalism, conservatism, and socialism, altered the relationship of citizens to the state, and created the legal and institutional foundation for capitalism in much of Continental Europe. It also set an important precedent to governments throughout Europe about what can happen when social and political unrest is left to fester, initiating an era of political and social reform.

Some possible questions to consider:

• Why did revolution engulf France in 1789? Why then and not earlier?
• What was the relationship between the French Revolution and changes to the economy and society in France?
• Was the course of the French Revolution inevitable given the structure of the Old Regime? Why or why not?
• Why did the French Revolution continue and lead to so many forms of government? Why did it result in Napoleon?
• What was the legacy of the Revolution and Napoleon for France? For Europe?
• What was the legacy of the French Revolution beyond Europe?

WEEK 2: The Industrial Revolution and its Consequences

1.) University of Chicago Readings in Western Civilization, vol. 8 (Moodle):
   a) T.B. Macaulay, Speech on Parliamentary Reform (2 March 1831), 41-54.
   b) 1846-47 Factory Legislation Debates, 62-82.
   c) Samuel Smiles, William Fairbairn, 82-92.
   d) Two articles from The Economist (1851), 92-100
   e) Thomas Gisborne, Enquiry into the Duties of the Female Sex, 100-106.

Between roughly 1760 and 1860 revolutionary changes in mechanical production first developed in Britain transformed much of the European economy, raising real per capita income and enabling tremendous population growth without declining living standards. These changes transformed European society, creating new social classes, spawning working class movements, modifying political institutions, altering the role and status of women, and changing perceptions of the past and future. The readings reveal many of these changes, the specific challenges they posed, as well as the first attempts to address them by reform legislation.

Some possible questions to consider:

- Why didn’t India, China, or Japan industrialize?
- Why did the Industrial Revolution begin in Britain? Why did it spread throughout Europe?
- What was the role of entrepreneurship in the Industrial Revolution?
- What was the role of the state in British industrialization?
- Why did industrialization result in both greater social mobility and rising inequality?
- How was urban life changed by industry?
- How did the Industrial Revolution affect women and gender roles?
- How did the class structure of Britain change as a result of industry?
- How did politics respond to the social changes ushered in by industry?

WEEK 3: Nationalism, the Revolutions of 1848, and German Unification

1.) University of Chicago Readings in Western Civilization, vol. 8 (Moodle):
   b) Giuseppe Mazzini, Duties to Country, 282-287.
Nationalism was a force bequeathed by revolutionary France to her European neighbors. This European nationalism challenged prevailing allegiances and animated revolutionaries to create new contiguous nation-states in what were dynastic territorial states and empires. While the Revolutions of 1848 revealed the explosive force of this nationalism, they also underscored the weaknesses and divisions of liberal nationalists in Italy and central Europe, as well as the resilience of the old regime, particularly in Germany. Indeed, German unification would occur on terms quite different than imagined by the Frankfurt revolutionaries.

Some possible questions to consider:

- What were the specific attributes of mid nineteenth-century European nationalism?
- Why did national revolutions erupt in so many places in Europe in 1848?
- How successful were the Revolutions of 1848? Where did they succeed or fail? Why?
- What role did nationalism play in creating and consolidating the German Empire?
- How revolutionary or reactionary was Bismarck? What was his legacy for Germany?
- How unified was Germany in 1871? In 1890?
- What was the impact of nationalism beyond Europe?
- How did the creation of the German Empire alter the European balance of power?

WEEK 4: Imperialism

1.) University of Chicago Readings in Western Civilization, vol. 8 (Moodle):

1.) University of Chicago Readings in Western Civilization, vol. 9 (Moodle):

By the turn of the 19th century, Europeans believed they were at the pinnacle of civilization, seemingly confirmed by great material, cultural, scientific and technological advances. Yet the period was also marked by prolonged cyclical downturns, fear of degeneracy and decline, and fierce economic competition. Heightened antagonism was also in evidence in colonial and naval rivalries. The rise of mass politics, the spread of social Darwinism and more racialized forms of nationalism and chauvinism also contributed to the rising tide of international tensions between roughly 1875 and 1914, just as they justified the subjugation of non-European lands and peoples. The period was also notable for the rise of new industrial powers like the United States, Japan and Germany and the relative economic decline of Great Britain.

Some possible questions to consider:

- Explain the appeal of overseas empire within Europe between 1875 and 1914.
- What were the prevailing assumptions of empire and how did they intersect with nationalism?
- How did the imperial state and white settlers interact with native peoples?
- What accounts for the heightened economic and colonial competition between 1875 and 1914?
- How did European public opinion shape politics between 1875 and 1914?
- How did alliances and military strategies change in Europe between 1875 and 1914? Why?
- How do you account for the relative economic decline of Britain in these years?
- How did Britain’s perceptions of Germany change in this era? Why?
- Why did many people perceive this era as one of accelerated progress and change?

WEEK 5: The Great War and Its Consequences

1.) University of Chicago Readings in Western Civilization, vol. 9 (Moodle):
   c) J.M. Keynes, *The Economic Consequences of the Peace*, 175-90

2.) Poems by Siegfried Sassoon and Wilfred Owen (Moodle).

European rivalries and tensions generated during the last quarter of the 19th century were brought to a head by the last in a series of pre-war Balkan crises. Complex webs of alliances as well as mobilizations plans then pulled most of the European powers into a wider war. The technological innovations that had preceded these years produced warfare of unprecedented carnage that devoured the manpower and resources of entire empires. While military stalemate was ended by the Russian Revolution, the war was only successfully concluded after large-scale American intervention on behalf of the Entente powers. The Paris Peace, initially launched with many good intentions, failed to settle grievances or provide a basis for postwar economic recovery and political stability.

Some possible questions to consider:

- Why did a world war erupt in 1914 and not earlier?
- Who or what started the war? Why?
- Why did the war last as long as it did and cost so much in lives and treasure?
- What were the most important political and social consequences of the war?
- How workable was the Versailles Treaty? What were its biggest problems? Why?
- What was the impact of the war on European overseas empire?
- What were the economic consequences of the peace?
- Why did perceptions of the war change in the 1920s?

**WEEK 6: The Russian Revolution and Stalinism**

1.) University of Chicago Readings in Western Civilization, vol. 9 (Moodle):

   - [http://academic.shu.edu/russianhistory/index.php/Lenin,_What_is_to_be_Done](http://academic.shu.edu/russianhistory/index.php/Lenin,_What_is_to_be_Done)

5.) Leon Trotsky, *Literature and Revolution*, ch. 7:
   - [http://www.marxists.org/archive/trotsky/1924/lit_revo/index.htm](http://www.marxists.org/archive/trotsky/1924/lit_revo/index.htm)
Like the Weimar Republic, the Soviet Union was the product of war and defeat. As in some evaluations of interwar Germany, it has been tempting for some to assert that Bolshevik Russia was from the outset doomed to degenerate into a totalitarian dictatorship. Others would dispute this, drawing comparisons with other European revolutions and emphasizing the open-ended nature of revolution. Either way, there is no question that the Revolution transformed the Soviet Union from a predominantly rural and agrarian society into an urban and industrial one, albeit in ways radically different than in Great Britain more than a century earlier.

Some possible questions to consider:

- Why did the Tsarist war effort fail and why did it result in revolution?
- What is the nature of Leninism and how did it set the Bolsheviks apart?
- Why did the Bolsheviks prevail in the Russian Revolution and Civil War?
- What was the Bolshevik vision for Russian society? How close did they come to realizing it?
- How did Stalin rise to power after Lenin’s death? How did he construct a cult of personality?
- What were the aims and impact of Stalin’s five-year plans? His Purges?
- How did Stalin change Soviet society?
- Why was Marxism-Leninism popular elsewhere in the world in the 1930s?
Depression and the mass unemployment that came in its wake fatally weakened it. The demise of the republic in 1933 with Hitler’s appointment as chancellor revealed how a parliamentary democracy with a free market system could degenerate into a totalitarian regime bent on conquest and domination. Some see Nazism as the inevitable outgrowth of nineteenth-century German militarism, nationalism and imperialism, while others emphasize the impact of war and defeat, the Versailles Treaty, the fear of Bolshevism, and the severe economic crises and political instability of the interwar period. What is certain is that the Nazi regime was bent from the outset to overturn the Paris peace and embark on a policy of remilitarization and conquest.

Some possible questions to consider:

- How did the First World War create conditions conducive to fascism and Nazism?
- What accounts for Hitler’s mass following?
- How did the Nazis come to power in Germany?
- What was the Nazi vision of empire and how was that different from or similar to imperialism before 1914?
- What were the aims of Appeasement and why did it fail to prevent war?
- What were the global factors that contributed to the Second World War?
- How do you explain the Holocaust? Was it the inevitable outcome of Nazi ideology and Hitler’s will or was it more the product of structural factors and the contingencies of war?
- How was World War II different from World War I?
- Why was Germany such a disruptive force to world order before 1945?

WEEK 8: Postwar European Reconstruction and Prosperity

1.) University of Chicago Readings in Western Civilization, vol. 9 (Moodle):

2.) Walter Laqueur, *Europe in Our Time*, 3-143, 200-19, 231-64 (Moodle).

From the perspective of mountains of rubble and millions of homeless and displaced people that was postwar Europe, it would have been hard to imagine that in little more than ten years prewar levels of prosperity would be surpassed in much of Western Europe. Even more amazing to a continent habituated to nearly half a century of uncertainty and warfare was the level of political stability and cooperation possible in the 1950s and 60s, despite the obvious division of Europe between the superpowers.
Some possible questions to consider:

- How was the postwar settlement after 1945 different than in 1918-19? What had changed?
- What did it mean for Europe to have its fate determined by the USA and USSR?
- How did the Cold War begin? Why?
- How did postwar domestic European politics change as a result of the experience of fascism, communism, and war?
- Why did Western European states assume so many new social responsibilities after the war?
- Why was European economic growth so rapid in the 1950s and 1960s?
- What were the institutional foundations of Western European cooperation?
- What factors beyond the European Coal and Steel Community contributed to greater mutual understanding reconciliation in Europe?
