

RADICAL RAPTORS

THINK DEEPER: QUESTIONS TO PONDER

- * What are some reasons a scientist would observe a bird? How about an artist? A bird-watcher? A fisherman? Why might you observe a bird closely? What kinds of things would these different people notice about a bird?
- What adaptations do you have to help you survive in your habitat?

CHALLENGE

- Think of an animal that fascinates you. Do some research: Where does it live? What does it eat? What adaptations does it have? What makes it unique? Next, share what you learned — your way! You might write a report, draw a diagram, make a diorama, or create a poem, story, painting, or song — or some combination.
- Use your imagination to design an animal that can avoid being caught by a raptor. What adaptations does it have? Draw a picture of it.
